

1 Request Testing

It is not possible to write a test for request because we need another player to make the requests.

In order to test if the request are working properly, Below there are some scenario's to describe how it should work.

The bot doesn't have any strategy yet. This will be done later.

1.1 Answer to Buy request

Play the tygron game with another stakeholder than services. Select a part of the land of services to buy from. Fill in the price per m2 you want to pay for this land. Send the request. The bot shouldn't accept this request and send a No back. This is because our bot doesn't want to loose any land.

1.2 Answer to Sell request

Play the tygron game with another stakeholder than services. Select a part of the land of your own to sell to services Fill in the price per m2 you want to get for this land. Send the request. The bot should accept this request and send a Yes back. This is because our bot always want extra land, because we don't have much land.

1.3 Don't answer to buy request to other stakeholders.

Play the tygron game with another stakeholder than services. Select a part of the land of a random stakeholder except for yourself and services to buy from. Fill in the price per m2 you want to pay for this land. Send the request. The bot shouldn't answer at all, because this requests has nothing to to with us.

1.4 Don't answer to sell request to other stakeholders.

Play the tygron game with another stakeholder than services. Select a part of the land of your own to sell to a random stakeholder except for yourself and services. Fill in the price per m2 you want to get for this land. Send the request. The bot shouldn't answer at all, because this requests has nothing to to with us.
